

# HOVERCRAFT

## Creative D.I.Y activities

### INTRODUCTION

In this activity, children can make their own hovercraft using these simple items.

### WHAT WE NEED

- CD
- Water
- Liquid
- Bottle Top
- Blue tack/putty
- Balloon
- Flat/smooth surface

### WHAT TO DO

Roll out some blue tack into a long sausage shape. Press the blue tack to the bottom of the water bottle lid, making sure it goes all around the rim and no gaps. Place the water bottle lid over the hole in the middle of the CD, again make sure there are no gaps. Press down firmly. Blow up the balloon, pinch the neck and attach to the water bottle lid, keeping the neck pinched. Place the CD flat on the surface and let go of the balloon. Give it a light push and watch it float over the surface.
