

Boats & Cars

Simple DIY Vehicles

INTRODUCTION

Build your own easy to make cars and boats, using recycled materials, and have a race to see which is the fastest.

WHAT WE NEED

- Scrap food packaging, milk carton tops, drinking straws
- Hole punch, scissors, plyers
- Wooden BBQ Skewers, string
- Plasticine or blutac, sticky tape

WHAT TO DO

Punch two holes on each side of your chosen food packaging, and thread a straw through both holes on each end, trimming the straws to fit.

Pierce holes through the bottle tops with the skewer, then thread the skewers through the straws. Place the bottle tops onto the ends, trimming the skewers to fit.

Tie string to the front to pull your vehicle along.

To make a boat make a sail from a straw and some paper, and secure it to the body with blutac.
