

WIND SOCK

Eco-Friendly Activity

INTRODUCTION

Made entirely from recycled materials, this inexpensive project makes a fun wind toy, or waterproof decoration for the garden.

WHAT WE NEED

- A large plastic juice bottle
- Scissors
- Double sided tape
- Colourful carrier bags
- String

WHAT TO DO

Cut a ring from a juice bottle about 4cm wide, then place a strip of double sided tape around the top edge of the ring.

Attach strips of carrier bags (approx. 3cm wide) to the tape until the plastic ring is covered.

Lastly, cut a long piece of string and tie it to each side to make a handle.

You are now ready to take your wind sock outdoors and watch as it takes flight in the wind!
