

SECRET OF WATER RISING

Easy-to-do Experiment

INTRODUCTION

A play experiment exploring the properties of water. This is typically enjoyed by older children, and adult supervision is necessary for this activity.

WHAT WE NEED

- A long candle
- Plate
- Glass or a small vase
- Water
- Food colouring
- Lighter or matches

WHAT TO DO

Stir together water and food colouring in a bowl, then pour the water onto a plate.

Place the candle in the centre of the plate. The adult present should then light the candle and cover it with the glass.

Watch what happens!

Tip: You can also try this with different sizes of glasses or with different colours in the water.
